in. INDEX

3F Filippi, a company that has made lighting history in Italy, is now a reality at the service of professionals and designers in search of ***quality solutions***.

The most important value:
absolute ***transparency towards the market***.

Since 1952, ***we have been designing and selling quality luminaires*** that guarantee ***performance over time***, thus establishing ourselves as a ***reliable partner*** for the realisation of every lighting project.

3F Filippi is one of the very few companies in Europe to own a ***rotating mirror Goniophotometer***.

The use of this technology allows us to ***guarantee the quality, reliability and authenticity*** of the reported data, through tests such as: ***photometric measurements*** (intensity, distribution, luminance), ***colorimetric measurements*** (light spectrum, colour temperature, colour rendering) and ***punctual thermal measurements*** on the luminaire's internal components.

RELIABILITY

Whenever a customer opts for our products, he must be certain that he is choosing the best there is in terms of technical performance, reliability and consumption.

SUSTAINABILITY

Each product is designed as a platform adaptable to our customers' needs, so that it can be reused, reconditioned, upgraded and recycled.

SECURITY

All products are tested in-house in accordance with current national regulations CEI 34-21, European EN 60598-1 and international IEC 60598-1, guaranteeing maximum safety, quality and durability.

Millumino
R I T Y

Millumino represents the perfect synthesis between light and matter: an essential design that defines space with elegance and versatility.

The pure, luminous opal body is interrupted by a striped end that houses the technological heart of the lamp.

Design by
Alfonso Femia
AF Design

mi. *MILLUMINO*

Light as a significant element, embracing concepts of **fluidity** and **dynamism** to convey the identity of a space that seeks to increasingly connect with the empathy of those who live in it and interact over time with the products that furnish it.

Available in a wide range of finishes and configurations, **Millumino** blends naturally into any setting thanks to its high **modularity**.
The possibility of placing the blind body at the ends or in a central position allows you to create **dynamic lighting** compositions that can be **customized** and **perfectly calibrated** to your design needs.

Millumino is the essence of light transformed into matter, a harmonious encounter between **formal minimalism** and **technological innovation** that merge into a single luminous sign.

Millumino is a stand-alone light tube with a diameter of 60 mm, which uses an extruded aluminum profile as its supporting structure, precisely integrating LED technology, suspension systems, and an opal screen. The latter ensures diffused and uniform light distribution, enhancing the purity of the form and the surrounding environment. The blind section, available in different lengths depending on the size of the product, houses the electronics and wiring inside, ensuring a clean aesthetic and perfect functional efficiency.

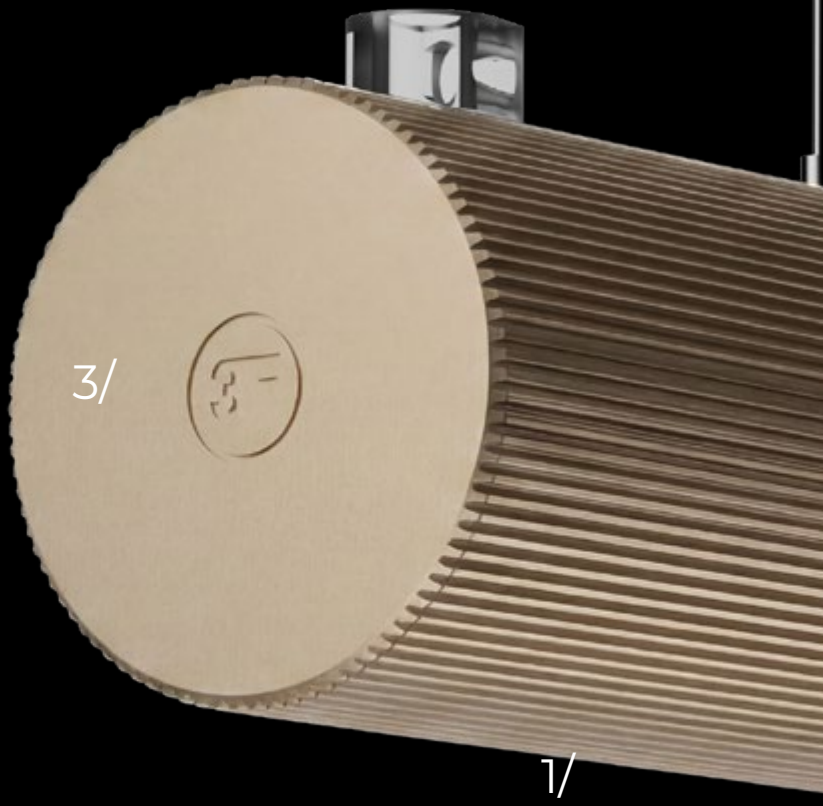
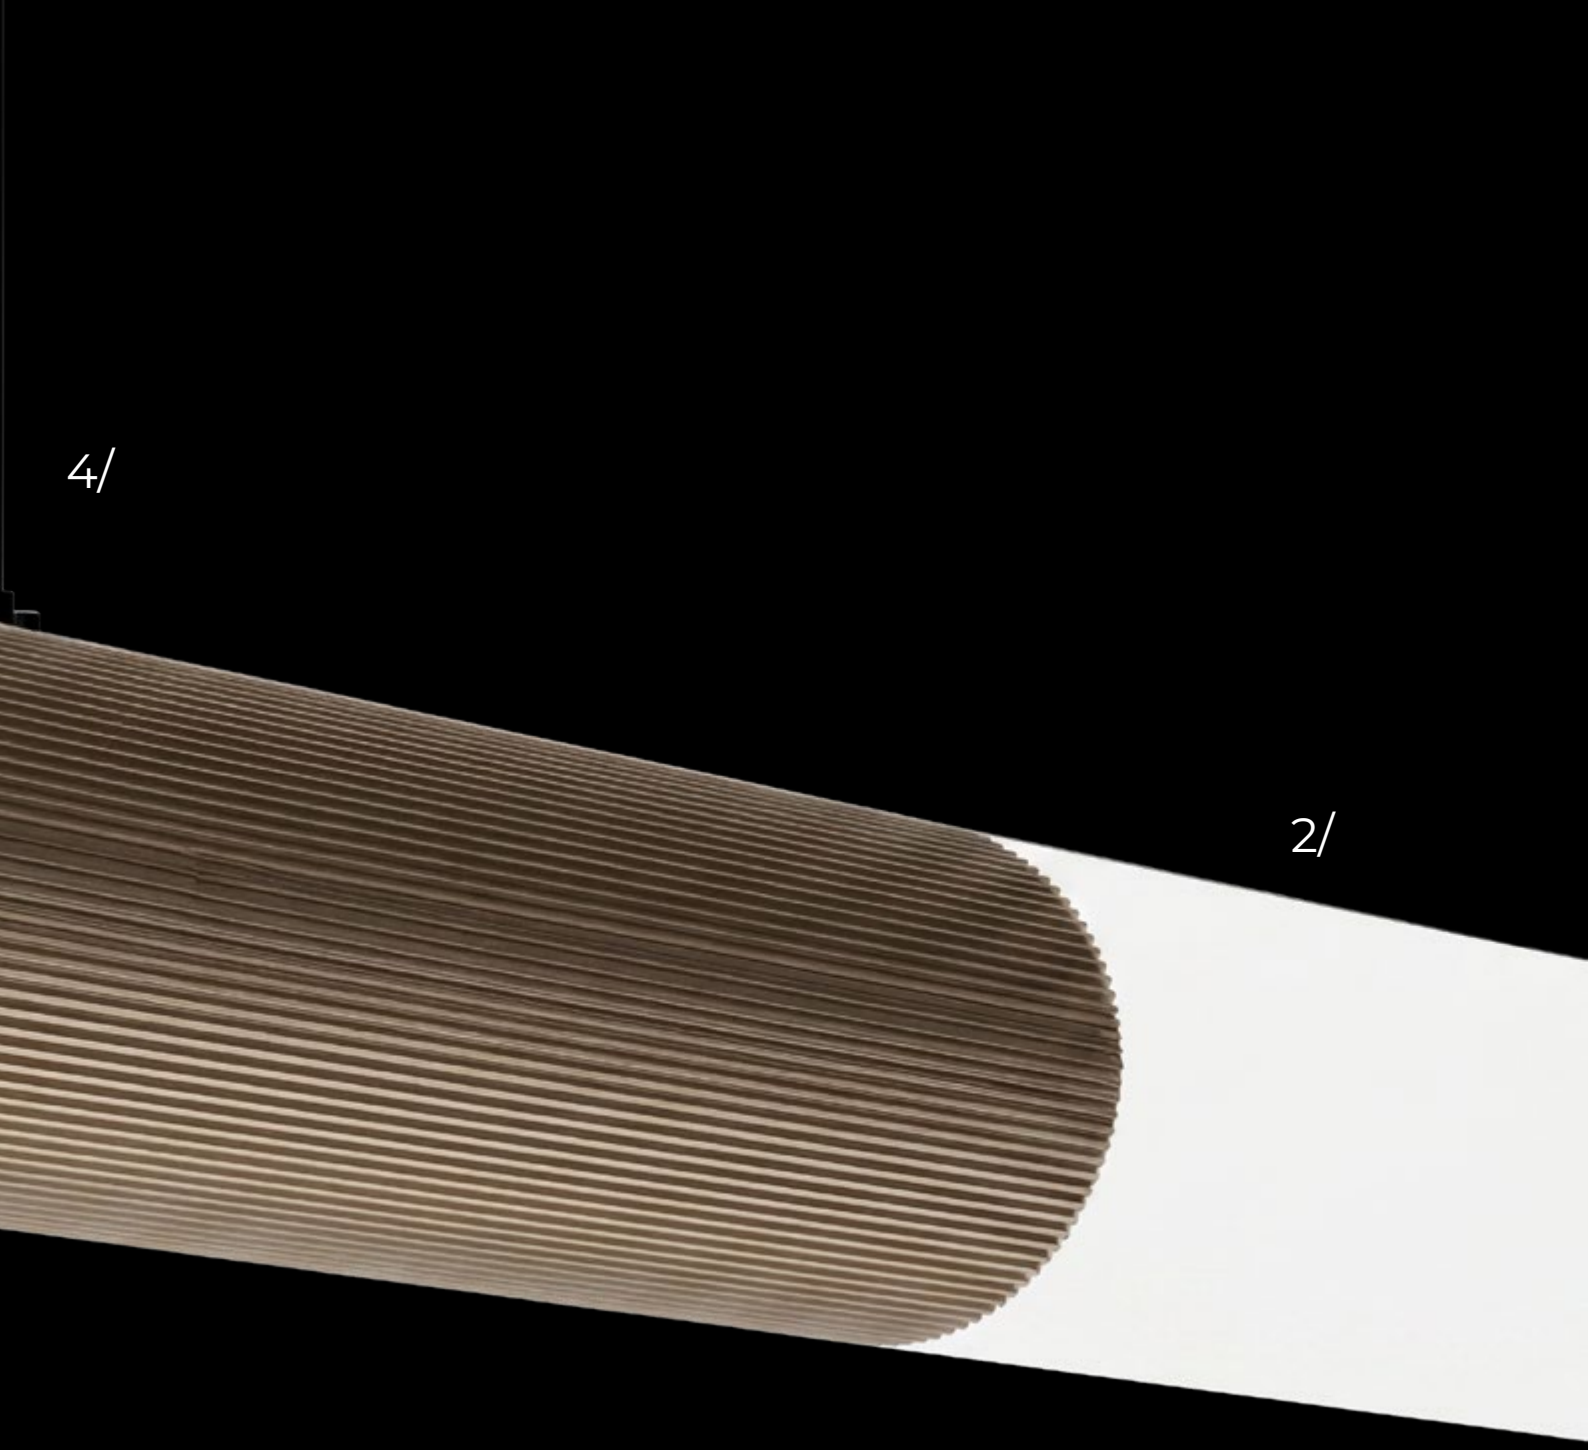
Installation

1/ Side blind module
2/ Center blind module
3/ Blind module on both sides
4/ L-shaped joint



The **Millumino** consists of a linear structure in extruded aluminum, on which all the components are installed:

1/ Blind module
2/ Light module
3/ Closing/alignment heads
4/ Adjustable suspensions



Adjustable suspension

The **Millumino** suspension system allows it to be moved along the entire length of the product. For this reason, it can be **installed** very **flexibly**, as it has no fixed center-to-center distance.

Construction characteristics

Lighting
- Diffused distribution.
- Lifetime (L80/B10): 100000 h. (tq+25°C)
- Photobiological safety RG0.

Electrical
- CE EN 60598-1.

Mechanical
- Extruded aluminum supporting structure.
- Blind polycarbonate housing elements
- Anti-glare diffuser screen in opal polycarbonate.

Atelier(s) Alfonso Femia (AF517) is, from 2017, the new name of 5+1AA. Created by **Alfonso Femia** with other fellow travelers in 1995, the **Atelier(s)** explores the world and the human relationships through architecture, dialog and matter, listening, searching and asserting an idea of the project as a dialog tool and the importance to think and imagine the spaces, the architectures and the chronotopic cities.
